

Why Use Front-end Data Collection for SAP?

workforce integration

Utilizing a central time and data entry method across the enterprise means ensuring informational integrity and increasing operational efficiencies.

Many organizations require an automated time recording solution without sole reliance on manual data entry by time administrators and employees. A front-end data collection solution maximizes the benefits of your SAP solution with integration to data collection devices technologies including:

- Badge-based
- Biometrics
- Touch-screen Kiosk
- Mobile / Wireless
- Telephone / IVR
- PC / Web

Data collected through a diverse range of TimeLink's interaction technologies is made available in many modules of SAP including:

- HR
- Production Planning (PP)
- Plant Maintenance (PM)
- Project System (PS)
- Cross-Application Timesheet (CATS)
- Employee Self-Service (ESS)

A front-end data collection solution ensures that the data passed across your enterprise is accurate and timely. Precise workforce data in your business systems will streamline business processes and facilitate the accurate calculation of payroll.

Benefits of a Front-End Data Collection Solution for SAP

Virtually no administrative effort required; employees enter time at the 'point of activity'

Customizable user interfaces for all data collection offerings

Diverse interaction technologies to match organization needs and budget

Automated data collection heightens data accuracy by eliminating problems of error-prone manual data entry

Accurate workforce data seamlessly integrated with SAP in real-time

Real-time view of employees' activities empowers decision-making

Extracts employee information from SAP, providing ESS functionality at device
